Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

## CASE SUMMARY

PSU 49 CASE NO. 157A TYPE OF ACCIDENT Car/Object - Multiple impacts

### A. DESCRIPTION OF THE ACCIDENT SEQUENCE AND ACCIDENT PECULIARITIES

(Provide a summary of the accident sequence as well as any particular event of the accident that is noteworthy. Injury mechanism and vehicle crashworthiness is the focus, not driver culpability. Do not include any personal identifiers.)

V1 was traveling north on an urban tollway [REDACTED] [REDACTED] and V1 began to rotate counter-clockwise. After rotating approximately 120 degrees, the right-front corner of V1 struck a concrete median barrier. V1 then rode up on the barrier and the left side struck a street light pole located on top of the wall. V1 then departed the wall and came to rest in the road headed west. The rear of V1 was later struck by another vehicle, which was reported in a separate accident report. The driver of V1 was ejected. Both occupants were fatally injured. V1 was towed.

CRASHWORTHINESS DATA SYSTEM

1. Primary Sampling Unit Number 49

3. Vehicle Number 01

2. Case Number - Stratum 157A

## VEHICLE IDENTIFICATION

VIN JN1CZ24H5MX

Model Year 91

Vehicle Make (specify): NISSAN

Vehicle Model (specify): 300 ZX

## LOCATOR

Locate the end of the damage with respect to the vehicle longitudinal center line or bumper corner for end impacts or an undamaged axle for side impacts.

| Specific Impact No. | Location of Direct Damage   | Location of Field-L        |
|---------------------|-----------------------------|----------------------------|
| 1                   | BEGINS AT RE CORNER         | ENTIRE RIGHT SIDE          |
| 2                   | STARTS 34" FRT OF REAR AXLE | STARTS 2" FRT OF REAR AXLE |

## CRUSH PROFILE

NOTES: Identify the plane at which the C-measurements are taken (e.g., at bumper, above bumper, at sill, above sill, etc.) and label adjustments (e.g., free space).

Measure and document on the vehicle diagram the location of maximum crush.

Measure C1 to C6 from driver to passenger side in front or rear impacts and rear to front in side impacts.

UNABLE TO GET STANDS BACK ENOUGH BECAUSE OF WALL

Free space value is defined as the distance between the baseline and the original body contour taken at the individual C locations. This may include the following: bumper lead, bumper taper, side protrusion, side taper, etc. Record the value for each C-measurement and maximum crush.

Use as many lines/columns as necessary to describe each damage profile.

NOTES: Sketch new perimeter and cross hatch direct damage and single hatch induced damage on all views. Annotate observations which might be useful in reconstructing the accident (e.g., grass in tire bead, direction of striations, scuff on sidewall, etc.). If pulling trailer, sketch type of trailer and damage received on the back of this page.

Annotate any damage caused by extrication such as component removal by torching, prying, or hydraulic shears.

Note area of ejection/entrapment

Sketch windshield contact(s) and the damaged area(s) on the instrument panel outline (e.g., radio, glove compartment, damage to instrument panel structure).

Cross hatch contact points, draw spider webs or use other annotation as may be appropriate.

Annotate the contacted area with a letter (begin with A) and list on the Points of Occupant Contact page.

## National Accident Sampling System-Crashworthiness Data System: Update Form

**INJURY DATA**

Record below the actual injuries sustained by this occupant that were identified from the official and unofficial data sources. Remember not to double count an injury just because it was identified from two different sources. If greater than ten injuries have been documented, encode the balance on the Occupant Injury Supplement.

## National Accident Sampling System-Crashworthiness Data System: Update Form

**INJURY DATA**

Record below the actual injuries sustained by this occupant that were identified from the official and unofficial data sources. Remember not to double count an injury just because it was identified from two different sources. If greater than ten injuries have been documented, encode the balance on the Occupant Injury Supplement.
